❖ Five Simple Reasons That Trading Plans Fail

Reason 1: Lack of Specificity

A trading plan needs to be clear and specific. Vague goals and strategies make it difficult to measure progress and adapt to changing market conditions. Use specific entry and exit criteria, risk management rules, and profit targets to ensure your plan is actionable and effective.

Reason 2: Poor Risk Management

Many trading plans fail due to inadequate risk management. Risking too much capital on a single trade or failing to set stop-loss orders can lead to catastrophic losses. Ensure your plan includes proper risk management guidelines to protect your trading capital.

Reason 3: Overtrading

Overtrading is a common pitfall for traders. It often happens when traders deviate from their plan, either due to impulsive decisions or FOMO (Fear of Missing Out). Stick to your predefined trading schedule and avoid chasing trades outside of your strategy.

Reason 4: Emotional Decision-Making

Emotions can wreak havoc on trading plans. Greed and fear can lead to impulsive decisions that deviate from your strategy. Implement rules and techniques to manage emotions, such as meditation, journaling, or using trading psychology resources.

Reason 5: Neglecting Review and Adaptation

A trading plan should not be static. Markets evolve, and your strategy should too. Regularly review your plan, track performance, and adapt it based on your results and changing market conditions. Continuous improvement is key to long-term success.

THAT'S THE REASON WHY WE TEACH YOU FIVE STRATEGIES INSTEAD OF ONE OR TWO.

❖ WHY YOU NEED MULTIPLE STRATEGIES

Range Bound Markets

- ❖ **Mean-reversion scalping**

Breakout Markets

- ❖ **Breakout scalping**

Trending Markets

- ❖ **Momentum scalping**

**Why you need
multiple strategies**

❖ MARKET ADAPTATIVE STRATEGIES

**Fashionably Late
Scalp**

HitchHiker Scalp

Back\$ide Scalp

**Second Chance
Scalp**

Rubber Band Scalp

Scalping strategy	Fashionably late	Hitchhiker	Second chance	Back side	Rubber band
Win rate %	60 %	55 - 60%	50 - 55%	50 - 60%	60 - 65%
Risk : Reward	(1 : 3)	(1: 1.9)	(1: 1.9)	(1: 1.4)	(1: 1.6)
